SAMPLE TELECOM TARIFF SCHEDULE

Fictional training document for LangChain / RAG ingestion demonstrations

Document ID: TARIFF-IN-2026-001 **Version:** 1.2 **Status:** Active (demo)

Effective period: 01 November 2026 to 31 March 2027
Market: India **Currency:** Indian Rupees (INR)
Last revised: 01 November 2026

IMPORTANT: All prices, plans, taxes, policies and examples in this document are fictional and intended only for software testing. They are not actual operator offers or legally binding tariffs.

1. Monthly prepaid plans

Plan ID	Monthly price	Data allowance	Voice	SMS	Validity
P-199	■199	2 GB total	Unlimited local & STD	100	28 days
P-399	■399	1.5 GB/day	Unlimited local & STD	100/day	28 days
P-599	■599	2 GB/day	Unlimited local & STD	100/day	56 days
P-999	■999	2.5 GB/day	Unlimited local & STD	100/day	84 days

2. Pay-as-you-go and out-of-bundle rates

Service	Rate	Billing unit / condition
Domestic data after daily allowance	■0.50	Per MB; charged in 10 KB increments
Local voice (when plan benefit is exhausted)	■0.80	Per minute; 60-second pulse
STD voice (when plan benefit is exhausted)	■1.20	Per minute; 60-second pulse
SMS (after included quota)	■1.00	Per SMS
National roaming data	■0.50	Per MB, unless covered by an active pack
National roaming voice	■0.80	Per minute, unless covered by an active pack

3. International roaming packs

Pack ID	Destination group	Price	Data	Voice	Validity
IR-699	Zone A	■699	1 GB	100 minutes	7 days
IR-1499	Zone A	■1,499	3 GB	300 minutes	14 days
IR-2499	Zone B	■2,499	5 GB	200 minutes	14 days

Zone A: United States, United Kingdom, Singapore and United Arab Emirates.
Zone B: All other supported international roaming destinations. Destination eligibility must be checked before pack activation.

4. Billing, taxes and charging rules

4.1 Plan renewal: A prepaid plan renews only when sufficient account balance is available at the renewal time. If renewal fails, outgoing services may be restricted according to the operator's service policy.

4.2 Data allowance: Daily data benefits reset at 00:00 India Standard Time (IST). Unused daily data does not carry forward unless a specific plan states otherwise.

4.3 Data charging: Usage beyond the included allowance is charged using the applicable out-of-bundle rate. The rate table and an active add-on pack must be checked before calculating the charge.

4.4 Taxes: For this demo, apply 18% GST to taxable service charges. Displayed plan prices are exclusive of GST unless explicitly stated otherwise.

4.5 Rounding: Calculate charges to two decimal places. Round the final invoice amount to the nearest paise (■0.01).

4.6 Roaming: An active roaming pack takes precedence over pay-as-you-go roaming rates for eligible usage within the pack's destination group and validity period. Usage outside the pack allowance is charged at the applicable out-of-bundle rate.

4.7 Version control: Apply the tariff version whose effective period covers the service usage date. Do not apply a later tariff version retroactively.

5. Worked billing example

Customer C101 is subscribed to plan P-999. During the billing period, the customer has a ■999 plan charge and ■501 of eligible roaming usage outside an active roaming pack.

Description	Amount
Monthly plan charge	■999.00
Roaming usage charge	■501.00
Subtotal before GST	■1,500.00
GST at 18% (illustrative)	■270.00
Total including GST	**■1,770.00**

This example illustrates the tax rule in section 4.4. A real billing system must verify whether each charge is taxable, whether the plan price is tax-inclusive, and whether any exemptions or adjustments apply.

6. Dispute and adjustment policy

• Customers may raise a billing dispute within 30 calendar days of the invoice date.

• The billing team must compare rated usage records, plan entitlements, active add-ons, roaming records and the tariff version effective on the usage date.

• A credit or refund must not be issued solely on an LLM recommendation. It requires approval by an authorized billing supervisor.

• Approved adjustments must include a reason code, supporting evidence, approver ID, timestamp and CRM case reference.

• If source records are missing or contradictory, mark the case as requiring investigation instead of assuming that the customer was overcharged.

7. RAG metadata and retrieval guidance

Recommended metadata fields to attach to chunks during ingestion:

Field	Example value	Purpose
document_id	TARIFF-IN-2026-001	Identify source document
version	1.2	Version-aware retrieval
effective_from	2026-11-01	Filter by start date
effective_to	2027-03-31	Filter by end date
market	IN	Market / country filtering
plan_id	P-999	Plan-specific retrieval
section	Billing and taxes	Section-level filtering

Suggested RAG test queries

1. What is the monthly price and validity of plan P-999?
2. What is the out-of-bundle domestic data rate?
3. Which countries are included in Zone A roaming?
4. What GST rate is specified in this demo tariff?
5. How should a billing dispute be investigated?
6. Which tariff version applies to usage dated 15 December 2026?
